

## SCIENCE AND TECHNOLOGY

This term the students from 3/4 MS were lucky enough to go on an excursion to Sydney Observatory to further their learning on the relationship between the Sun, Moon and Earth. While they were there, they used augmented reality to revise the cycle of day and night leading to the discovery of the reason for the season. They timed the movement of the Sun to investigate and calculate the length of the day and they learnt to use the Southern Cross to find direction and identify seasonal changes in the sky.

## P.E.

This Term we have also been lucky enough to participate in a netball skills program and have been making great

progress with our throwing and catching skills as well as our shooting skills all while have some fun with our classmates.
